LIARD FIREBOX

ABOUT THE LIARD FIREBOX.

The concept of the firebox is a well proven one. Using small pieces of wood in a concentrated area, they are ideal when you want the warmth of a campfire, in a safe, functional and environmentally conscious manner. Fireboxes have been used for many years by outfitters, hunters and trappers, canoeists and other outdoor enthusiasts and are usually made from normal metal sheeting.

So what makes the LIARD FIREBOX different from the others? The difference is in its engineering and quality. Other fireboxes will rust and warp. The LIARD FIREBOX will not rust and will not warp. Manufactured in Switzerland, constructed with stainless steel, using patented* design improvements, the LIARD FIREBOX is the most convenient there is.

*patent pending
